

FOR IMMEDIATE RELEASE:

Effective August 28, 2018: Oaktree Health - a subsidiary of EPS Biotechnology which represents world class blood glucose brands including FortisCare and EasyMax received the 510k FDA Approval for our Bluetooth Dongle Device to be used with our EMMU GDH-FAD Meter.

The purpose of this Bluetooth Dongle is to deliver an easy way to use our EZ-Gluco App on Apple smartphones. Much like the current integrated options, our Dongle will upload all your readings in the app and email them to your physician, wellness coach or CDE. The benefit of the Bluetooth Dongle vs current market status is more flexibility in data storage and a more reliable delivery process compared to an integrated Bluetooth meter. It's basically a separate piece and easy to use!

Oaktree Health's mission as a company is to simplify the lives of our customers and the Bluetooth Dongle is the next logical step in that endeavor. With its easy to use, accessible and cost-effective features, the Bluetooth Dongle will help both patients and their physicians with maximum convenience and efficiency.

"Our BT Dongle will position our clients and patients with an easy to use product avoiding the headaches with an integrated unit," says Donald Chargin President & CEO of Oak Tree Health.
